

Protein Hinge: CPJUMP1 cell perturbation restoration figure

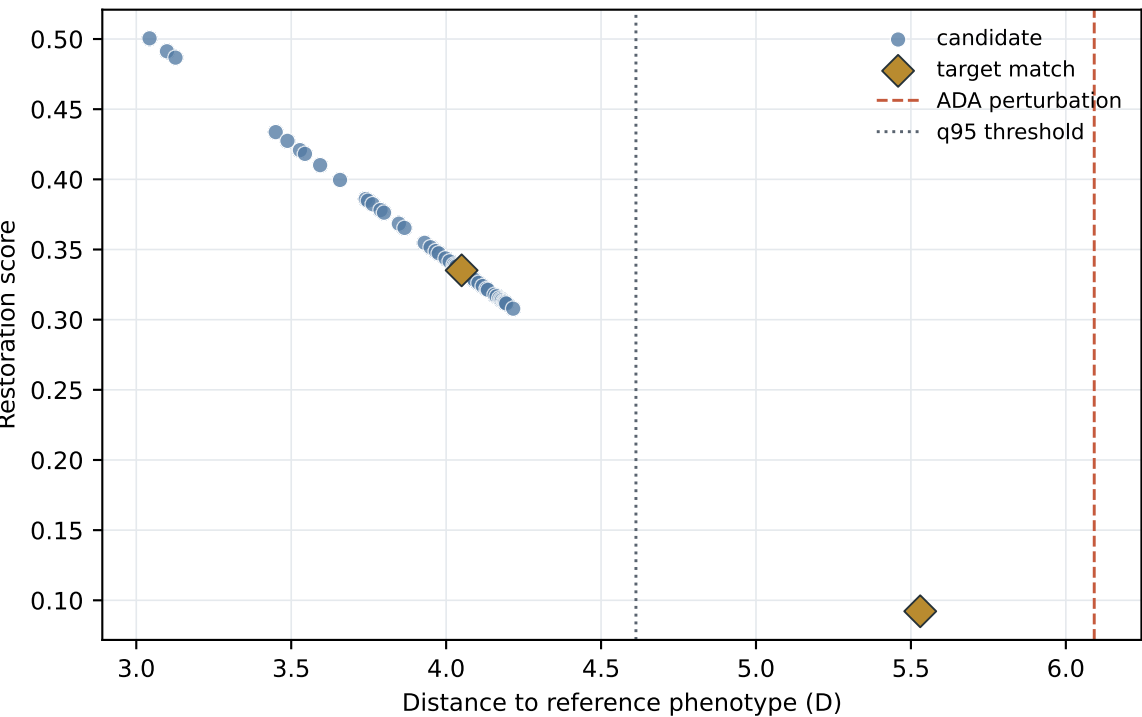

A. Selected perturbation exceeds the reference threshold

B. Top candidate profiles move toward the reference state

C. Distance-domain restoration benchmark, n=50

D. Provenance and interpretation

Dataset	CPJUMP1 processed subset / Cell Painting profiles
Reference state	124 control replicates
Selected perturbation	BR00118050:ADA
Candidate count	50
Top candidate	desonide (PLA2G1B)
Top score	0.500
Known-pair rank	28
Claim ceiling	REPURPOSING_HYPOTHESIS
Interpretation: candidates are ranked by return toward the reference phenotype in a processed morphology distance space. This is predicted counter-perturbation, not measured rescue or therapeutic efficacy.
